## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of Group I, comprising polyimide as the preferred species of thermoplastic component in the reply filed on May 17, 2005 is acknowledged.
2. Claims 2-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 17, 2005.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. 5,731,373 (Hirose et al).

Hirose et al disclose a composition comprising a thermoplastic polyacetal, 20% by weight of mica, 20% by weight of graphite and 15% by weight of carbon fiber, wherein the percentages are based on the total weight of the composition. The composition is governed by a coefficient of friction of less than 0.20. See example 5.

The composition meets the requirements of the above-rejected claims.

### *Claim Rejections - 35 USC § 103*

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1711

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 6-8 and 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over U. S. 5,731,373 (Hirose et al), described hereinabove .

As to claim 6, polyesters, polyimides or polyetherketones are listed as suitable alternatives for the polyacetal thermoplastic polymer used in the examples (column 2, lines 14-21). Accordingly, it would have been obvious to one having ordinary skill in the art to have used any one of these disclosed alternative thermoplastic polymers with the reasonable expectation of success.

The carbon fiber used in Hirose et al's examples has an average length of 6 mm. It is maintained, however, that patentees' general disclosure is not limited to said preferred embodiment and, as such, implicitly suggests that a carbon fiber of any length can be used with satisfaction. One having ordinary skill in the art would have found the use of a carbon fiber length of 8.2 mm obvious because similar fiber lengths would be expected to have the same properties. Accordingly, absent criticality for the claimed fiber length, no patentability can be seen in claim 7.

***Claim Rejections - 35 USC § 112***

7. Claims 7, 8, 11 and 12 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear how the length of at least 150 micrometers further limits the length of claim 7.

Art Unit: 1711

***Response to Arguments***

8. Applicant's arguments filed May 17, 2005 have been fully considered and are persuasive to the extent that the rejection over George et al has been withdrawn.
